

# intelligent **First Aid**™

*"The Talking First Aid Kit"*

The intelligent **First Aid**™ Kit, designed by medical and educational experts, combines supplies, visual instruction cards and now an audio module for verbal guidance to manage the most common injuries, at home, at work, or at play.

The kit is separated into individually labeled and color-coded injury packs so the user has all the supplies and easy to follow instructions for managing a specific injury. The audio module in each injury card takes the technology a step further. By the squeeze of a button, the module narrates step-by-step instructions to manage the injury, pausing and repeating when necessary for accurate response.

By combining the necessary supplies with the new audio technology, the Intelligent **First Aid**™ Kits are the most dependable tool for providing rapid and accurate first aid guidance in the event of an injury.

The Case includes a guidebook, with additional injury categories, a product manual with audio instructions, a combo book light/flashlight and a shoulder strap.
